

Install once. Launch anytime.

OrgChart Studio runs locally after first-time setup.

ONE LOCAL SOURCE OF TRUTH

01 FIRST INSTALL OR UPDATE

After the GitHub repository is public, copy both commands below. The second command installs, builds, verifies, and launches OrgChart Studio.

```
/usr/bin/curl --fail --location --show-error \  
  --output "$HOME/Downloads/orgchart-studio-install.zsh" \  
  "https://raw.githubusercontent.com/adammalin/Organizational-Chart-Platform/main/scripts/bootstrap-mac-source-test.zsh"  
  
/bin/zsh "$HOME/Downloads/orgchart-studio-install.zsh" \  
  "$HOME/OrgChart-Studio-source-test"
```

TO UPDATE LATER: quit OrgChart Studio, then run these same two commands again.

02 START ORGCHART STUDIO AFTER INSTALL

For later sessions, open Terminal and run:

```
/bin/zsh "$HOME/OrgChart-Studio-source-test/scripts/start-mac-source-test.zsh"
```

03 FIRST WORKING SESSION

Create a blank chart, or use Sources & imports to validate a reviewed CSV, Excel, or JSON file. In Desktop file locations, keep the live library in a local folder and select a different backup folder. OneDrive or Dropbox is appropriate only for the encrypted backup package.

LIVE DATA

Choose local only

Keep the working database outside Git, OneDrive, Dropbox, and iCloud.

ENCRYPTED BACKUP

Choose separately

A OneDrive or Dropbox folder may receive the encrypted .orgchart-backup file.

SAFE MIGRATION

Restart to verify

The app copies and checksums data, switches, and keeps the old recovery copy.

REQUIREMENTS

macOS 13+ | Internet | Public GitHub repository access

Managed Mac: follow approved software, data, and support processes. Use Command-Q to stop the app.

Draft source test - not a signed /Applications package or an approved production system. <https://github.com/adammalin/Organizational-Chart-Platform>
