NO SIGNED INSTALLER REQUIRED | MACOS AND WINDOWS

# Install and get to work.

Public GitHub download, verified local runtime, private desktop app.

01

### BEFORE YOU BEGIN

Use Terminal on Mac. On Windows, open Terminal, Command Prompt, or PowerShell. Copy the full command, paste, and press Enter. Use your normal account; administrator access and GitHub login are not needed.

## Mac - paste all five lines into Terminal

```
/usr/bin/curl --fail --location --show-error \
  --output "$HOME/Downloads/orgchart-studio-install.zsh" \
  "https://raw.githubusercontent.com/adammalin/Org-Chart-Studio/main/scripts/bootstrap-mac-source-test.zsh"
/bin/zsh "$HOME/Downloads/orgchart-studio-install.zsh" \
  "$HOME/OrgChart-Studio-source-test"
```

## Windows - one command in Terminal, Command Prompt, or PowerShell

```
powershell.exe -NoLogo -NoProfile -ExecutionPolicy Bypass -Command "Set-Location ([IO.Path]::GetTempPath());
Invoke-WebRequest -UseBasicParsing
'https://raw.githubusercontent.com/adammalin/Org-Chart-Studio/main/scripts/install-windows.ps1' -OutFile orgchart-install.ps1
-ErrorAction Stop; & .\orgchart-install.ps1"
```

### OPEN INSTALL PAGE AND CLICK COPY

The command above is shown wrapped. The web page copies it as one line.

### DURING SETUP

Allow several minutes. Setup downloads, installs, checks, and opens the app. Windows setup creates Start menu and desktop shortcuts; optional AI setup is available in the app later. On Mac, type y at Install the local MCP integration? [y/N] to connect AI, or press Return to skip.

# Start, update, and protect.

02

Application code and chart data stay separate.

## START LATER

### Mac - easiest option

```
Double-click Start-OrgChart-Studio.command in the OrgChart-Studio-source-test folder.
```

### Windows - easiest option

```
Choose OrgChart Studio from the Start menu or desktop.
Fallback: double-click Start-OrgChart-Studio.cmd in the installed folder.
```

## UPDATE

Make a fresh backup, close the app with its red X, and repeat the same installation commands from page 1. The script downloads one exact current commit, removes obsolete application files, preserves the private runtime and working folders, rebuilds, tests, and starts the updated copy.

### 1 LIVE LIBRARY

Defaults to Application Support on Mac or AppData on Windows, outside the downloaded application folder.

### 2 BACKUP FOLDER

Choose a separate local folder, OneDrive or Dropbox. Encryption is optional for each backup.

### 3 RUN BACKUP

Choose all or selected charts, choose protection, then use Run backup now before an update or migration.

## PRIVACY BOUNDARY

**GitHub receives no charts, source documents, databases, or backup packages. The desktop window can contact only its private loopback server. Keep live data out of Git and cloud-sync folders. A cloud backup may be encrypted or readable; choose protection appropriate for the data and access controls.**

OPTIONAL LOCAL AI | HUMAN-REVIEWED CHANGES

# Connect AI locally.

AI proposes. You review. OrgChart Studio remains the source of truth.

03

### 1 INSTALL

In the app, use Install local AI integration. On Mac, you can also type y at the setup prompt.

### 2 RESTART AI

Quit and reopen ChatGPT Desktop or Codex once so it discovers orgchart_studio.

### 3 OPEN THE APP

OrgChart Studio must be running before an AI can call its local tools.

## A GOOD FIRST PROMPT

**Use the orgchart_studio MCP server. List the charts first. Open the chart I name, then stage the smallest reviewed proposal for this change: "Renee is retiring soon. Show that position as vacant." Do not save it directly.**

## WHAT HAPPENS NEXT

The app shows a green activity edge while AI uses the local tools. A proposal compares Before and After. Apply, reject, or review later. AI can also validate structured data and stage a new chart import, but it cannot silently overwrite a saved chart.

## CONTROLS THAT STAY WITH YOU

Pause local AI access, limit it to selected charts, or remove the integration without changing charts. Retained-source extraction starts off and is session-only. Chart fields returned through MCP enter that AI conversation, so use only content approved for that AI environment.

**Windows setup logs: %LOCALAPPDATA%\ORNL OrgChart Studio\Installer. If setup fails, keep the log and repeat the page 1 command to repair. Never share backup passphrases or raw retained source files with AI.**
